Criteria	Marks	What to Evaluate
1. Problem Definition & Business Understanding	10	Clear problem statement, objectives, stakeholders, business relevance, KPIs
2. Dataset & Data Understanding	10	Dataset relevance, feature understanding, data dictionary, data quality
3. Data Preprocessing & Cleaning	10	Missing values, duplicates, outliers, encoding, scaling, appropriate transformations
4. Exploratory Data Analysis (EDA)	10	Statistical analysis, meaningful visualizations, patterns, correlations, insights
5. Feature Engineering / Selection	10	Creation/selection of relevant features, handling leakage, justification
6. Model Selection & Implementation	15	Appropriate ML algorithm, implementation, train-test split, pipeline, methodology
7. Model Evaluation & Validation	15	Appropriate metrics, validation, confusion matrix/ relevant metrics, interpretation
8. Business Insights & Recommendations	10	Converts model/analysis results into actionable business recommendations
10. Documentation & Presentation	10	Report quality, PPT, code organization, GitHub/readme, presentation and Q&A
